# OSFA - Student Loans:
# Project Description and Project Model
## CMSC 127 XY

Group 5

University of the Philippines - Baguio

September 14, 2017

# Description

This project aims to solve the problems encountered by the staff of Office of Student Financial Assistance (OSFA) with regards to their data about student loans. It aims to create a database where one can systematically arrange a loan for a student.

The main purpose of this database is to centralize all the data and information of the student loans in one system, for easier access and updates of the data.

# Problems Addressed By The Project

- Lack of Data Management System of Student Loans
- Clunky File Management of Data regarding Student Loans
- Data Redundancy

# Objectives

- To create a database that will help the Office of Student Financial Assistance (OSFA) to organize their data regarding student loans.
- To create a link between student loans and the STS Brackets of the students.
- To generate files regarding the database that are either printable or editable.
